Global Learning in the COIL Environment
How Is It Done, What Can Be Learned

Collaborative Online International Learning (COIL) environments integrate global learning into the curricula of students who may be place or time-bound. COIL courses can be launched in all disciplines and facilitate interdisciplinary connections that allow students to make unique insights and deepen the global engagement of students as they link university classes in different countries.

Participants will hear from presenters working at the system, campus, or classroom level for the SUNY system, a leader in the COIL field. Learn how students can become engaged in "big" problem solving with their international peers and discuss ways that this can be implemented at your institution.

WEBINAR
Date: Friday, February 09, 2018
Time: 12:00-1:00 p.m
Location: SMC 202 (upstairs Galley)
