### REPEATED CREDITS EXAMPLE

This is earned credit on your transcript. In other words, this is how many credits have been completed and graded on your record to date. (In this example BIOL 100 from Spring 2013, which shows up under the “Insufficient” category is counting here)

The "Credits Applied" to your degree block, includes in-progress and earned courses. It does not include "Insufficient" courses. (In this example, BIOL 100 from Fall 2014, which is in-progress, is included here, but BIOL 100 from Spring 2013 is not included because it is being repeated and those credits will be replaced.)

These 3 credits count in "Transcript Total Credits" (91). Once the semester is over and a new BIOL 100 grade is earned, this course will show as 0 credits and "E" for excluded.

These 3 credits count in "Credits Applied" (103). Once the semester is over and this course is processed, this course will show as "I" for included.
This is earned credit on your transcript. In other words, this is how many credits have been completed and graded on your record to date.

(In this example, MATH 090, which shows up under the "Not Counted Towards Degree Requirements" category at the bottom of the audit, is counted here for the transcript.)

The "Credits Applied" includes in-progress and earned credits. It does not include developmental courses or other "Not Counted Toward Degree Requirements" credits.

In this example, MATH 090 is not counted in this number because it MAY NOT be used to satisfy credits for the degree.

These credits are counted only in the "Transcript Total Credits." They are not applied to the credits for your degree, nor can they be.

In this example to verify the "Credits Applied" to degree, you can add the "Transcript Total Credits" to the "In-Progress" credits, but then YOU MUST SUBTRACT the 3 credits from the "Not Counted Towards Degree" course.

\(108 + 12 - 3 = 117\)
