A headache is pain that occurs anywhere in the head or neck.

**Types of headache and symptoms** may include:

- **Tension headache:**
  - Pressure or tightness around both sides of head or neck
  - Mild to moderate pain that is steady and does not throb
  - Pain is not worsened by activity
  - There may be tenderness in the muscles of the head, neck or shoulders

- **Migraine headache:**
  - Headache that causes moderate to severe pain that is worsened by light, noise, and motion, and often accompanied by nausea and vomiting. Headache may last for a few hours and as long as three days.

- **Cluster headache:**
  - Begins quickly without warning
  - Headache is usually deep, excruciating, continuous and explosive in quality
  - May occur up to eight times per day but usually short in duration
  - Pain typically begins in or around the eye or temple
  - The pain is always on one side

**Treatments** may include pain relievers such as Aspirin, Acetaminophen, NSAIDS and/or prescription medications. In addition to medical treatments some simple lifestyle adjustments can help reduce the frequency of headaches. These include:

- Stop Smoking
- Reduce the amount of alcohol you drink
- Decrease the amount of caffeine you drink/eat
- Eat and sleep on a regular schedule
- Exercise several times per week

**Headache danger signs:** Seek medical attention immediately if headache:

- Comes on suddenly, becomes severe within a few seconds or minutes, or could be described as “the worst headache of your life”
- Is severe and occurs with a fever of stiff neck
- Occurs with a seizure, personality changes, confusion or passing out
- Begins quickly after strenuous exercise or minor injury
- Is new and occurs with weakness, numbness, or difficulty seeing
