

Editing a Netscape Navigator page using Mozilla Composer on a PC computer. 2 Steps

This Step-by-Step explains the procedures for opening a file in Mozilla Composer viewed on a PC computer.

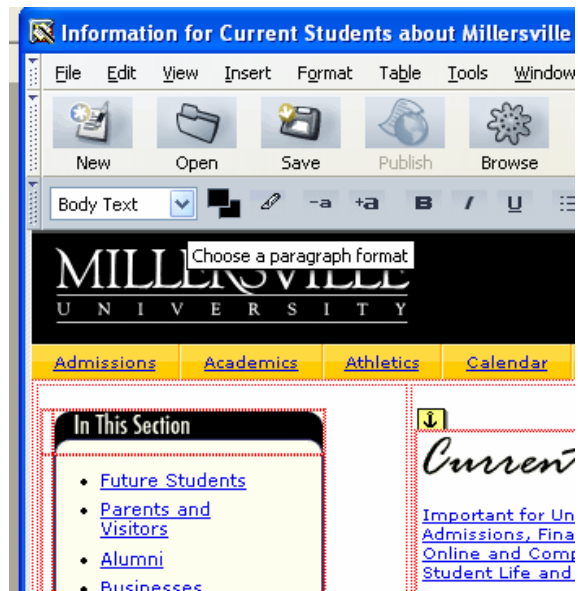

This Step-by-Step assumes that the Mozilla browser is already open/viewable on the computer monitor.

Easiest Method:

1) While viewing the desired Web page/file, click on **File** on the menu bar and select **Edit Page**.

2) The File will now open in Mozilla Composer a separate application. Mozilla Composer can be identified by the items that are located on the menu bar. Instead of the Back and Forward arrows found in Mozilla Navigator it will have icons for New, Open, and Save.

Once the Composer web page editor is open the items on the page can be changed and saved to your computer, these changes will not take effect until the page that was opened is published.
