

# 'VILLE UNPLUGGED

## PLAY MAKER

Energy play makers take action based on good information. Learn how much energy different devices and appliances consume using the Kill-A-Watt electricity monitor.

### How to measure electricity using the Kill-A-Watt

- 1) Borrow a Kill-A-Watt from a residence hall front desk
- 2) Plug the Kill-A-Watt into an outlet
- 3) Plug the device or appliance into the Kill-A-Watt
- 4) Press the center button labeled "Watt"
- 5) Turn the device on and record the wattage below.
- 6) Turn this completed form into the 'Ville Unplugged table to be entered to win gift cards and solar-powered chargers.

Kill-A-Watt electricity monitor

### 'Ville Unplugged Table Locations

South Village Patio. Sundays in April, 4 to 6pm.

Student Memorial Center Juice Bar Table. Thursdays in April, 12 to 1pm.

### Record Appliance and Device Wattage

Measure and record the wattage for at least 4 of the 6 appliances and devices listed below. Wattage tells you how much power is needed to run the device or appliance. Higher wattage means the device consumes more energy over time.

\_\_\_\_\_ Television

\_\_\_\_\_ Gaming System

\_\_\_\_\_ Computer

\_\_\_\_\_ Microwave

\_\_\_\_\_ Phone/device charger

\_\_\_\_\_ Desk Lamp
