

Dear Science Educator,

Millersville University  
EARTH SCIENCES

The Department of Earth Sciences at Millersville University offers programs leading to **B.S. degrees in geology, meteorology, ocean sciences, earth and space sciences, and earth sciences**

**education.** We are interested in partnering with science teachers by offering you and your students our expertise on general or specific topics in any of these disciplines through guest presentations delivered online in synchronous mode. In return, your students will be introduced to Millersville University and the earth sciences degree programs with the hope that they may give us a closer look when considering choices for post-secondary education. As examples, for a lesson on weather, you may find it desirable to have a more detailed presentation on tornadoes or hurricanes for an AP course, which we could provide as a guest presentation, or we could offer lessons on mineral, energy, or water resources for those students interested in environmental resource issues. Earth sciences is a broad field encompassing everything from space to the earth's core, and it is the curricular locus for understanding natural disasters.

We would like to make this as easy as possible for you by offering a single point of contact using the link [MU ESCI Outreach Program - Google Forms](#) in which you can provide your contact information and the subject matter for the guest presentation. You can also contact us at [esci@millersville.edu](mailto:esci@millersville.edu). We will determine the appropriate faculty member for this subject, and they will contact you to gather more information to make it happen.

We look forward to hearing from you.

Buoyant regards,  
Richard D. Clark  
Chair, Department of Earth Sciences  
Professor of Meteorology  
Program Coordinator, M.S. in Integrated Scientific Applications  
Program Coordinator, Graduate Certificate in Space Weather
